The textbook Algorithms, 4th Edition by Robert Sedgewick and Kevin Wayne [Amazon · Pearson · InformIT] surveys the most important algorithms and data structures in use today. We motivate each algorithm that we address by examining its impact on applications to science, engineering, and industry. The textbook is organized into six chapters:

Algorithms, 4th Edition by Robert Sedgewick and Kevin Wayne

This fourth edition of Robert Sedgewick and Kevin Wayne's Algorithms is the leading textbook on algorithms today and is widely used in colleges and universities worldwide. This book surveys the most important computer algorithms currently in use and provides a full treatment of data structures and algorithms for sorting, searching, graph processing, and string processing--including fifty algorithms every programmer should know.

Solutions to the exercises of the Algorithms book by Robert Sedgewick and Kevin Wayne (4th editon). I found the book to be an excellent resource to learning algorithms and data structures. Since there are not many (almost none) solutions of the exercises on the Internet and the only ones available are incomplete, I decided to share my work on the exercises.

I think the algorithms reading roadmap is: Algorithms (Sedgewick) -> CLRS -> Introduction to Analysis of Algorithms -> TAOCP. However, the huge problem which makes me voting 4 star for the book is that some figures and illustrates are rendered badly (page 9, 675, 624, 621, 579, 576, 346, 326).
