Have you ever seen a butterfly in the snow? Probably not. Butterflies can't survive cold weather, so when winter comes, many butterflies fly to warmer places. They migrate. Woodchucks don't like cold weather either but they don't migrate; they hibernate. Woodchucks sleep in their dens all winter long. Read and find out how other animals cope with winter's worst weather.

Molly loves to play. Play at horse riding. Play at making a dinosaur. So when her mother says Molly, tidy up, she never has time to finish the job. But soon Molly realises that while she is not tidying up

something is. She is determined to find out who or what it is.

In a world where we usually measure animals by human standards, prize-winning author and MacArthur Fellow Carl Safina takes us inside their lives and minds, witnessing their profound capacity for perception, thought and emotion, showing why the word "it" is often inappropriate as we discover who they really are. Weaving decades of observations of actual families of free-living creatures with new discoveries about brain functioning, Carl Safina's narrative breaches many commonly held boundaries between humans and other animals. In *Beyond Words*, readers travel the wilds of Africa to visit some of the last great elephant gatherings, then follow wolves of Yellowstone National Park sort out the aftermath of their personal tragedy, then plunge into the astonishingly peaceful society of killer whales living in waters of the Pacific Northwest. We spend quality time, too, with dogs and falcons and ravens; and consider how the human mind originated. In his wise and passionate new book, Safina delivers a graceful examination of how animals truly think and feel, which calls to question what really does—and what should—make us human.

A humorous, exciting tale of an ordinary girl who makes an extraordinary scientific discovery—a blind fish that walks. When seventh-grader Alexis catches an unusual fish that looks like a living fossil, she sets off a frenzied scientific hunt for more of its kind. Alexis and her friend Darshan join the hunt, snorkeling, sounding the depths of Glacial Lake, even observing from a helicopter and exploring a cave. All the while, they fight to keep the selfish Dr. Mertz from claiming the discovery all for himself. When Alexis follows one final hunch, she risks her life and almost loses her friend. *Walking Fish* is a scientific adventure that provides a perfect combination of literacy and science.

The updated edition of this bestselling book is for the teacher who wants support and practical advice to recognize and deal with the common misconceptions encountered in the primary science classroom. Michael Allen describes over 100 common misconceptions and their potential origins. In addition to background theoretical and research material, he offers creative activities to help you grasp the underlying scientific concepts and bring them to life in the classroom, as well as practical strategies to improve pupil learning. This easy to navigate and friendly guide is a superb toolkit to support you as you teach or prepare to teach in the primary school, irrespective of your training route.

A board book version of Seuss's popular rhyming story describes each day in terms of a particular color which in turn is associated with specific emotions.

A retelling of a traditional West African tale that reveals how the mosquito developed its annoying habit.
