boost the power levels of weak signals. Amplifiers are needed in very long links to provide sufficient power to the receiver.

OPTICAL FIBER COMMUNICATION (15A04701)

Optical-fiber-based telecommunication networks have become a major information-transmission-system, with high capacity links encircling the globe in both terrestrial and undersea installations. Numerous passive and active optical devices within these links perform complex transmission and networking functions in the optical domain, such as signal amplification, restoration, routing, and switching.
