It has been known for several thousand years that the Earth is spherical (by educated people, at least). Sometime in the 2nd century BCE the size of the Earth was determined ($r_{\oplus} = 6,370 \text{ km}$). By the 19th

century its mass was known ($m_{\oplus} = 5.97 \times 10^{24}$ kg). And in the early 20th century the structure of the Earth was deduced.

Solid-state physics is the study of rigid matter, or solids, through methods such as quantum mechanics, crystallography, electromagnetism, and metallurgy. It is the largest branch of condensed matter physics. Solid-state

physics studies how the large-scale properties of solid materials result from their atomic-scale properties. Thus, solid-state physics forms a theoretical basis of materials science.
