The companion Complete A+ Guide to IT Hardware and Software Lab Manual provides students hands-on practice with various computer parts, mobile devices, wired networking, wireless networking, operating systems, and security. The 155 labs are designed in a step-by-step manner that allows students to experiment with various technologies and answer questions along the way to consider the steps being taken. Some labs include challenge areas to further practice the new concepts. The labs ensure students gain the experience and confidence required to succeed in industry.

Ready-made SPICE power supply solutions Now you can get solutions to the most difficult problems facing power supply designers: shrinking size and increased thermal constraints. Christophe Basso ' s SMPS SPICE Cookbook is a complete designer ' s toolkit with tested, ready-to-run SPICE models on an accompanying CD-ROM. The models come in all three SPICE flavors with demo versions. You can start from scratch, installing the software and simulating the examples in the book without any SPICE experience whatsoever. All the common SMPS topologies are covered: buck, boost, buck-boost, and SEPIC. Each is described in terms of relative strengths and weaknesses and then modeled. Just turn to the CD, pull out the model in the flavor of SPICE you use, plug in your own values — and out comes a design solution. All the models in the book have been carefully simulated and tested. A special website even lets you access new models that will be posted on a continuing basis

The Electronic Mechanic; Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study. It provides hundreds of questions and answers in the areas that will likely be covered on your upcoming exam, including but not limited to: basic electronics including circuitry, schematics, and wiring diagrams; use of electronic test equipment; operation, maintenance, and repair of equipment used in instrumentation including meters, sensors, indicators, recorders, and data acquisition equipment; understanding and interpreting technical material; mathematics including algebra, geometry and trigonometry; and more.

In Learning and Leading with Habits of Mind, noted educators Arthur L. Costa and Bena Kallick present a comprehensive guide to shaping schools around Habits of Mind. The habits are a repertoire of behaviors that help both students and teachers successfully navigate the various challenges and problems they encounter in the classroom and in everyday life. The Habits of Mind include * Persisting * Managing impulsivity * Listening with understanding and empathy * Thinking flexibly * Thinking about thinking (metacognition) * Striving for accuracy * Questioning and posing problems * Applying past knowledge to new situations * Thinking and communicating with clarity and precision * Gathering data through all senses * Creating, imagining, innovating * Responding with wonderment and awe * Taking responsible risks * Finding humor * Thinking interdependently * Remaining open to continuous learning This volume brings together--in a revised and expanded format--concepts from the four books in Costa and Kallick's earlier work Habits of Mind: A Developmental Series. Along with other highly respected scholars and practitioners, the authors explain how the 16 Habits of Mind dovetail with up-to-date concepts of what constitutes intelligence; present instructional strategies for activating the habits and creating a "thought-full" classroom environment; offer assessment and reporting strategies that incorporate the habits; and provide real-life examples of how communities, school districts, building administrators, and teachers can integrate the habits into their school culture. Drawing upon their research and work over many years, in many countries, Costa and Kallick present a compelling rationale for using the Habits of Mind as a foundation for leading, teaching, learning, and living well in a complex world.
