Rat development is also generally 1 day behind that of mouse. (The table below gives details relating to the staging of rat development). Huber in 1915 first described the early development of the albino rat (*Mus Norvegicus Albinus*) within the uterus from pronuclear stage to day 9.

Witschi Rat Stages. Shown below are the Witschi standard stages of development and the timing and specific features that identify each stage. See also the Rat Timeline which gives a day by day sequence and adds additional research findings on rat development.

Rat Development Stages - Embryology

Purkinje cells from rat are known to express both low- and high-threshold Ca²⁺ channels throughout development (Kaneda et al. 1990; Nam & Hockberger, 1997). However, electrophysiological and

Acces PDF The Development Of The Rat

immunohistochemical evidence suggest a change in the relative contributions of specific Ca²⁺-channel subunits over time that matches the development of spike output properties reported here.

Physiological and morphological development of the rat ...

Rat embryos do have the advantage of being much larger than mouse embryos and easy to breed. Another advantage of rats is in vision development studies, as that retinal development continues postnatally (most vertebrate neurological systems are difficult to

Embryological origins and development of the rat diaphragm

Our developmental studies of the human central nervous system have been going on for close to 20 years. At first, we used the monograph published in 1919 by Hochstetter to view various stages of human brain development, then matched them to rat brain development (see Figure 1 in Bayer et al. 1993; pdf file link below).

Development of the Rat Spinal Cord: Immuno- and Enzyme ...

Within animals, this variability was not random, but exhibited regions of higher and lower H(+). We conclude that retinal acidosis begins to develop at an early stage of diabetes (1-3 months) in rats. However, it does not progress, and the acidity of diabetic rat retina was diminished at later stages (3-6 months).
