Marketing practices have fundamentally changed over the past decade. This book documents the nature of these changes, examines their impact on marketers and marketing, explains the results of a major international study into the changing nature of contemporary marketing practices, assesses their implications for marketing and marketers and provides guidance for those who are implementing change processes to improve value creation capabilities.

A sustainability expert goes beyond renewables, calling on us to combat the climate crisis with a new, low-energy way of life. Concerns over climate change and energy depletion are increasing exponentially. Mainstream solutions still assume that some miracle will cure our climate ills without requiring us to change our energy-intensive lifestyle. But switching from fossil fuels to renewable energy sources isn't enough. We need a Plan C. In response to the converging crises of Peak Oil, climate change, and increasing inequity, sustainability expert Pat Murphy offers an inspiring vision of community and curtailment. Where cooperation replaces competition, we can deliberately reduce consumption of consumer goods. Plan C shows how each person's individual choices can dramatically reduce CO2 emissions, offering specific strategies in the areas of food, transportation, and housing.

How can we get from where we are to where we want to be? *Metaphors for Change* attempts to answer this question and provide a roadmap for sustainability by bringing together the thoughts of a unique collection of

leading change agents from business, government and academia. Environmental questions have previously been dealt with metaphorically, by catastrophism or manicheism (zero growth; Malthusianism, Deep Ecology; "man is the enemy"; less is more). These metaphors have had limited impact because they have failed to connect with the mainstream of cultural, political, and business ideas. This book examines a number of new metaphors – and related partnerships, tools and action – which appear to have greater possibilities for the world in which we now live. The editors argue that Metaphors for Change can deliver to the public and to decision-makers new perceptions ("structured knowledge") that can help interpret the past and the present, and help us forge the future. The wider the gap between the "now" and the "necessary", the stronger the bridging perceptions have to be in order to break through barriers of fear and conservatism. Some of the concepts considered are: sustainable development; the polluter pays principle; the precautionary principle; eco-efficiency; eco-effectiveness; life-cycle assessment; design for the environment; eco-services; dematerialization; industrial symbiosis; industrial ecology; and zero emissions. There are of course other useful metaphors on the horizon, some of them included in this book. Including key contributions from the ground-breaking conferences ECO 97 and ECO 99, along with other specially commissioned and reprinted pieces, Metaphors for Change provides a treasure chest of new ideas, innovations and action. Accessible and forward-thinking, it will prove indispensable both as a student learning tool and as a panoramic overview of the sustainability metaphors key thinkers believe we

In this work, the authors offer a unified, transdisciplinary approach for achieving sustainable development in industrialized nations. They present an insightful analysis of the ways in which industrial states are unsustainable and how economic and social welfare are related to the environment, public health and safety.

Since CAFE standards were established 25 years ago, there have been significant changes in motor vehicle technology, globalization of the industry, the mix and characteristics of vehicle sales, production capacity, and other factors. This volume evaluates the implications of these changes as well as changes anticipated in the next few years, on the need for CAFE, as well as the stringency and/or structure of the CAFE program in future years.

Remarkably, more than half of the world's population now lives in cities, and the numbers grow daily as people abandon rural areas. This fully updated and revised seventh edition of the classic text offers

readers a comprehensive set of tools for understanding the urban landscape, and, by extension, the world's politics, cultures, and economies. Providing a sweeping overview of world urban geography, noted experts explore the eleven major global regions. Each regional chapter considers urban history, economy, culture, and environment, as well as urban spatial models and problems and prospects. Each begins with two facing pages: a regional map that shows the major cities and a table of basic statistical information about cities and urbanization in each region and a list of ten salient points about that region's urban experience. Chapters conclude with a list of references, including films and webpages, which can be used by the student and instructor for additional information about specific cities. This edition adds the important new themes of climate change and migration, while continuing to focus specifically on sustainability, water, technology, social and environmental justice, security and conflict, the history of urban settlement, urban planning trends, and daily life. Vignettes of key cities give the reader a vivid understanding of daily life and the "spirit of place." The opening chapter presents an overview of key terms and concepts and explores contemporary world urbanization, and a concluding chapter projects the world's urban future. Liberally illustrated in full color with a new selection of photographs, maps, and diagrams, the text also includes a rich array of textboxes to highlight key topics ranging from migration and immigration to LBGTQ activism, human security, and climate change. Clearly written and timely, *Cities of the World* will be invaluable for those teaching introductory or advanced classes on global cities, regional geography, the developing world, and
