Before Taking Real Analysis (Math Major) Walter Rudin Principles Of Mathematical

Besides the terseness, Rudin's outlines of these topics do not provide the reader with their full mathematical machinery, leaving out many important subtleties and non-elementary constructions (e.g., PMA develops forms in a way that only implicitly references their tensorial nature, defining them as formal expressions that are only meaningful behind an integral sign, rather than a mathematical construction in their own right, while measure theory is developed somewhat unconventionally using ...

Proof If $x + = x + z$, the axioms (A) give $= + = \{-x + x\} + = -x + (x +) = -x + (x + z) = \{-x + x\} + z = 0 + z = z$. This proves (a). Take $z = 0$ in (a) to obtain (b). Take $z = -x$ in (a) to obtain (c). Since $-x + x = 0$, (c) (with $-x$ in place of x) gives (d).
